Subject: Gail Collins' Readers' Comments

<http://www.nytimes.com/2012/02/04/opinion/collins-the-politics-of-absolutely-everything.html?comments#permid=3:1>

George:

The column is just another bit of Gail Collins mail-it-in nonsense.

But look at the comment from Diana Moses, and my response to it.

B

Diana Moses · Arlington, MA · 

My husband was a Republican who donated to Planned Parenthood, gardened (especially roses), and traveled with the dog in the backseat of the car (the only thing strapped to the car regarding the dog would be what we had cleaned up after the dog on a stop, and he would hang the bag from the back windshield wiper until we got home (or somewhere else), where we could dispose of it properly). He was aware of how each person's tragedy from disease was equally important to the person involved, and was bothered by others' subscription to an apparent hierarchy of ailments or tragedies. Calling attention to an underserved medical situation should not result in negative attention to another health care need, I don't think. And I agree, including from my own experience from pre-cradle through the present, that women's health care in general could use improvement.

For most of its long history, the Republican party was populated by people who could think, and elected officials who would never pledge more allegiance to a Grover Norquist than to the Constitution. It is only recently that it has been bullied by a mob of its own making. No surprise to this left-listing old-timer that many Republicans support Planned Parenthood. Hopefully, they will fight to get back control of the party. [See Kristof column Feb. 1]

And this: Dogs. Without them, how would we ever get rid of that new car smell?
